1	Introduction	1
2	Some examples of geometry-algebra correspondence	11
2.1	Locally compact spaces and commutative C^* -algebras	11
2.2	Vector bundles and finite projective modules	13
2.3	Affine varieties and finitely generated commutative reduced algebras	17
2.4	Affine schemes and commutative rings	18
2.5	Compact Riemann surfaces and algebraic function fields	20
2.6	Sets and Boolean algebras	20
3	Noncommutative quotients	23
3.1	Groupoids	23
3.2	Groupoid algebras	26
3.3	Morita equivalence	30
3.4	Noncommutative quotients	34
4	Cyclic cohomology	39
4.1	Hochschild (co)homology	41
4.2	Cyclic (co)homology	53
5	Chern-Connes character	69
1	Banach and C^* -algebras	77
1.1	Gelfand's theory of commutative Banach algebras	83
1.2	States and the GNS construction	90
2	Idempotents and finite projective modules	93
3	Equivalence of categories	97
	Bibliography	99
